Multi-Functional CBRN Solutions

The FLYING LABORATORY

is a pioneering UAV-based product with

developed by Research International. A

(IMS)

onboard to provide toxic gas detection. Up to 20 chemical warfare agents and

toxic industrial gases can be detected

at part per billion to part per million concentrations. A UV particle fluoro-

meter is used to detect any unusually

high biological aerosol levels, and a

spectrometer is used in

CBRN monitoring capabilities

ion

combination with two Geiger counters to detect and identify nuclear materials and monitor radiation levels. One of the Geiger tubes is used for monitoring general background radiation levels, while the second, capable of detecting either alpha, beta or gamma radiation, is mounted so that it monitors radiation emitted from particulates captured by an aerosol sampling filter included in the payload.

An on-board air sampling circuit can grab a biological or radiological aerosol sample if the biological or radiological sensors detect unusual conditions. This sample is collected onto a compact 44 mm diameter high-flow electret filter with a 50% collection point of 0.5 microns, or with a lower flow electret filter with 99+% efficiency at 0.3 microns. The latter is favored for radiological sampling.

A video or continuously recording IR camera can also be provided in a gyroscopically stabilized gimbal mount. Camera video can be either streamed to a base station when within telemetry range, or stored onboard for later examination. A single-

FEATURES

- Complete CBRN Sensor suite
- Turn-key or payload only
- Fixed wing UAVs
- Multi-rotor helicopters
- Respirable bioaerosols
- Aerosol sample collection
- Optional IR/video
- Downlink or store data onboard
- Custom packages

APPLICATION AREAS

- Agriculture
- Public health
- Environmental protection
- Homeland security
- Military
- Public event security

board computer is used to combine, analyze and store digital data created by the various CBRN sensors. Sensor data, along with GPS coordinates and time, is stored on a 32GB SD memory card for post-flight analysis.

The UAV can be operated in a "manual" control mode when within wireless telemetry range or can be programmed for fully autonomous operation to meet applications involving longer flight distances. Special electronics and software allows automated landing by unskilled personnel and the UAVs have state-of-the-art mufflers to reduce propulsion system noise. Air residence times can be up to 15 hours depending on atmospheric conditions and the payload.

UAV Flying Laboratory Data Sheet

System detectors typically respond in 1 to 2 seconds. The gas detector has the largest latency period, about 4 seconds, which corresponds to less than +-45 meters uncertainty in position at cruising speed, or about +-26 meters at the lowest possible (stall) speed. All system components are capable of operation between -30°C and +60 °C. Specifications for the various subsystems are provided below but custom detection suites are also possible.

Figure 1: Biodetector hardware based on ultravioletstimulated biofluorescence.

Figure 2: 300 liter/minute aerosol sample collector components.

Figure 3: Radiation detector subsystem shown in a previous application, mounted in a cylindrical enclosure to the underside of a miniature UAV helicopter.

Figure 5: Second-generation IMS gas detector.

Figure 6: UAV airframe views.

BioAerosol Detector Specifications (See Figure 1 above)	
PARAMETER	DESCRIPTION
Operating Principle	Aerosol particle counter with UV biofluorescence signature detection
Excitation wavelength	360 um
Particle size range	Respirable particle range
Threat identification	Aerosolized bacteria, spores, viruses, toxins.
Detection limit	100 to 300 ACPLA, depending on threat
Data output rate	2 sec. and 1 minute update rates. 30 minute historical data profile used as a moving
	baseline for alarm protocols
Sampling Rate	1 liter per minute nominal
Alarms	Electronic digital alarm; software adjustable alarm criteria
Continuous Operating Time	Essentially unlimited if power is maintained
Operating temperature range	-30°C to 60°C
Humidity	0 to 95% non-condensing
Consumables	None
Aerosol	Sample Collector Specifications (See Figure 2 above)
PARAMETER	DESCRIPTION
Operating Principle	Electret dry filter media with high efficiency centrifugal fan.
Air Collection Rate	User adjustable 50 LPM to 300 LPM typical
Collection Efficiency	With bioaerosol filter: 0.5 um dia: 50%; 1.0 um dia: 75%; >2.0 um dia: 90%
	With radioactive aerosol filter: >99% for all particles greater than 0.3 microns
Operating Temp. Range	-40°C to 70°C
Filter media physical size	4.4 cm diameter active filter in 6.0 cm diameter holder.
System Controls	Microprocessor controlled. Operating characteristics addressable over RS-232 serial data
	link.

Thermal Camera/Gimbal Mount Specification (continued)		
Gimbal System		
Stabilization method	2-axis gyro stabilized fully integrated direct drive gimbal	
Stabilization	Better than 250 μrad	
Temperature	-40°C to 50°C operational	
Gas Detector Specificatons (See Figure 5 above)		
PARAMETER	DESCRIPTION	
Operating Principle	Second generation Ion Mobility Spectrometry (IMS)	
Ionization method	Corona discharge- nonradioactive	
Nerve agents detected	GA, GB, GD, GF, VX, HD, L, phosgene, nitrogen mustard, hydrogen cyanide	
Toxic Industrial Chemicals	10 toxic industrial gases simultaneously detected with nerve agents above	
Air sampling rate	400 ml/min sensor flow	
Sensitivity	Typically 1% of IDLH for GA, GB, GD, and GF nerve agents. PPB or PPM typical sensitivity levels for various toxic industrial vapors and gases	
Time to detect	4 secs worst case to detect a foreign trace gas. Detailed scans can then be run and the data stored for later depot-level analysis at the flight center after the UAV returns.	
Continuous Operating Time	Essentially unlimited if powered externally.	
Operating temperature range	-30°C to 60°C	
Humidity	0 to 95% non-condensing	
Consumables	Two gas scrubber cartridges need to be replaced after every 125 hours of continuous	
	operation	
UAV Specifications (See Figure 6 above)		
PARAMETER	DESCRIPTION	
Maximum payload	10.0 kg	
Payload volume	20 liters	
Range	Typical: 250 km with 3.5 liter fuel tank; 500 km with 7.5 liter fuel tank	
Ceiling	5000 m	
Flight time	Up to 18 hours with 7.5 liter fuel tank	
Stall speed	47 km/hr	
Maximum speed	130 km/hr	
Cruise speed	79 km/hr	
Wing span	3.3 m	
Overall Length	2.27 m	
Sound level	<60 dB @ 30 m	
Nondetectability range	700 m	
Takeoff and landing	Catapult or runway	
Avionics	Piccolo TASE200 autopilot with auto-landing capability; -40°C to 80°C	
Platform weight	10.0 kg
